

Mentor Matching Team 19 – Meeting 6 Minutes

5th April 2017

MEETING PARTICIPANTS

Christopher Lau, Matthew Bell, Harry Chen

Overview

There was a full-scale user acceptance test where we showed our client all the newly implemented features of our application. At this point, the development of our application was near completion and we wanted to update our client with our progress before applying the final touches to our application.

Topics Discussed

Application feedback:

For this meeting, we allowed our client to use the application by using Ionic View which allowed our client to host our application on her mobile device. She tested features such as user authentication system, admin features such as mentor programme creation/editing/deleting and cohort managing. She also tested our profile system and notification system. However, there was a minor bug noticed when registering as a mentee for a mentorship program. This bug was a minor fix which was fixed quickly.

Overall, our client was happy with the application and also gave us feedback in the form of an email. In the email, she also included some minor addition that could be included if we had the time to do so.

Next Steps

The next steps after this meeting was to apply the final touches to the application based on our client feedback. She also expressed interest in joining us for the showcase during the 26th of April if she was available.
