

Mentor Matching Team 19 – Meeting 5 Minutes

8th February 2017

MEETING PARTICIPANTS

Christopher Lau, Matthew Bell, Harry Chen

Overview

This was the first meeting with our client for term 2. The purpose of this meeting was to update our client with the progress we have made in researching and developing our proof of concept during term 1. We also showed our client our interactive prototype and project website and video which she was satisfied with.

Topics Discussed

Interactive prototype feedback:

We used this meeting as an opportunity to get feedback on our interactive prototype so that we could have an idea of what the UI would look like before developing using the Ionic Framework.

Project website feedback:

We also used this opportunity to show her our project website and project video which illustrates our proof of concept into developing this application.

Next Steps

We also discussed about the next steps that we should proceed with after the meeting. We briefed our client on what we would do next in terms of development by telling her what technologies we planned to use and what platform we plan to build the application on. We also tried to arrange another meeting to meet her face to face if she was available.
